

Wałcz City

4.5 MW Wind Power Plant, Poland

Technical Data

Total installed capacity	4.5 MW
Turbine type	Nordex S77
Number of turbines	3
Tower height	100 m
Rotor diameter	77 m

Project Description

The wind farm Wałcz City was the first project RP Global implemented in Poland. It consists of three wind turbines of 1.5 MW each. The wind park is located in the district and commune of Wałcz, in the Voivodeship Zachodniopomorskie. The power plant displaces approximately 9, 243 tons of CO₂ per year. Financing was provided by the Banco Espírito Santo.

The wind park started producing electricity for the local grid in 2009.
